

I/A Series® Software

Foreign Device String Output (FSOUT) Block

The Foreign Device String Output (FSOUT) block provides the control strategy with the capability to output a single string in real-time to a PROFIBUS™-DP or Modbus™ remote I/O device via a Micro-I/A™ Station, or to a foreign device via an I/O gate. The block supports Auto/Manual control.

OVERVIEW

The Foreign Device String Output (FSOUT) block sends the string value received from the I/A Series control strategy to its applicable field device, when it receives a change. The block can be configured to perform output once, change driven only, or during every execution regardless of input changes.

String size is limited to 79 characters.

FSOUT can provide strings to:

- PROFIBUS-DP or Modbus remote I/O devices via a Micro-I/A Station

- foreign (third-party) devices⁽¹⁾ via an I/O gate.

As long as the block is in Auto and no error conditions exist, the value is moved from the block's connectable input parameter and sent to the Micro-I/A Station or I/O gate for delivery to the field device.

When the block is in Manual, processing of I/A Series data is suspended and the input is not sent to the field device by the block.

(1) Refer to *DDE I/O Gate* (PSS 21S-3A4 B3) for an explanation on how an I/O gate interfaces foreign devices.

Features

- Sends a single string to applicable field device
- Manual/Auto control of the block output signal; can be initiated by a host process or another block
- Supports a series of validation checks to ensure process is on-line before block initialization
- Specification of source point for a PROFIBUS-DP or Modbus remote I/O device, or for a foreign device.

Principal Parameters

Input

- 1 string input, derived from I/A Series control strategy
- Manual/Auto control mode switching

Output

- 1 string output to applicable field device, in Auto mode.

SUPPORT

FSOUT allows the following equipment to interface the applicable field devices:

- AW70 processors with control software (see *70 Series Application Workstation Model AW70* [PSS 21H-4U1 B3])
- AW51 processors (see *50 Series Application Workstation Model AW51* [PSS 21H-4R1 B3])
- Micro-I/A Station (see *Field Automation Subsystem Micro-I/A PROFIBUS-DP Remote I/O Interface* [PSS 21H-6C4 B4] or *Field Automation Subsystem Micro-I/A Modbus Remote I/O Interface* [PSS 21H-6C5 B4])
- I/O gate (see *DDE I/O Gate* [PSS 21S-3A4 B3]).
